

How to install and activate licenses Land Change Modeler for ArcGIS (LCM)

(Last updated on 8/25/2016)

Download and installation:

1. Download installation packages from <http://gis.harvard.edu/tools/software/land-change-modeler-20-arcgis>.
2. Run the installation executables: LCM4Arc2_Setup.exe
3. Note that you need to have ArcGIS for Desktop already installed on the same computer.

Activating LCM licenses:

1. Map a network drive to the license server (enter the following line into a cmd window):
`NET USE /P:YES Y: \\140.247.114.222\LCM4Arc_License TerrSet_222 /USER:Idrisi`
2. Open License Manager LCM for ArcGIS
3. Choose "Client"
4. Enter the following network string (if using the primary license server):
`\\140.247.114.222\LCM4Arc_License\lcm4arc.lic`
5. Click "Activate Online"
6. You should see that your license is now activated. Exit the License Manager.
7. Open ArcMap
8. Turn on the LCM extension
9. Enable the LCM toolbar
10. Click on the LCM tool to start using LCM.

You may also download and use the [MapLCMLicense.bat](#) file to map the above drive at one click. (Note: you may need to re-run this file again if the UNC path is dropped from your PC's network).
